

The Monarch Butterfly Life Cycle

Every monarch butterfly begins life as an **egg**. The egg hatches into a tiny, soft-bodied **caterpillar**, eating milkweed and growing until it forms into a pupa or **chrysalis**. The chrysalis is the mummy-like stage where it completes its transformation into a winged **adult**.

Can you find ALL of the stages of the monarch's life cycle?

Caterpillar grows by molting 5 INSTARS

There are over 100 TYPES of milkweed in North America!

What color is the milkweed in YOUR area?
